## Summary:

During my professional career, I had the opportunity to work in several roles. Always putting as fundamental principles the ethics, truth and innovation of the processes where I worked. With a synthetic view of the organization, I was able to contribute several times in the change and improvement of procedures and systems in the places where I worked.

In constant search for personal and professional improvement, I consider my curiosity and my ability to learn as my main strengths as a professional.

I currently work as an IT Analyst, with development and maintaining of web applications, DevOps, users support of internal systems of the company and in mobile applications aimed at the external public.
